

Can AI help me?

Ceardlann 1 — An féidir le AI cabhrú liom?

OBJECTIVE

Decide whether AI is appropriate for one real task — not just how to use it. “Can AI do it?” is not the same question as “Should AI do it?”

TIME	GROUP	REPORT BACK
25 minutes	5 groups of 3	60 seconds

ROLES (CAN ROTATE)

1. **Task owner** — knows the real task and what "done" looks like.
2. **AI operator / prompt writer** — types the prompts, reads the output aloud.
3. **Checker / sceptic** — asks "how do we know that's true?" and "what did it miss?"

CONNECTION TO THE MORNING

You have just seen: AI can be genuinely useful; AI can also be confidently wrong; and a real, documented case (the GAA match-programme artwork) where AI output looked fine but was not. This workshop is where you apply that judgement to your own work, not a hypothetical one.

BEFORE YOU BEGIN — WHAT NEVER GOES IN

The same instinct from Mary's cybersecurity section applies here — what are we handing over, and to whom?

- Confidential information
- Personal information
- Customer information
- Commercially sensitive information
- Passwords or credentials
- Private organisational information
- Restricted documents
- Anything organisational policy says must not leave the building

Use public, fictional or anonymised information instead.

WHAT YOU NEED TO DO

Turn the page and work through eight steps as a group, using the seven questions to structure your discussion. You do not need an AI tool for steps 1–3.

WORKSHOP 1 · DO THE ACTIVITY

Step by step

1. Choose a workplace task.
2. Describe how the task is currently done.
3. Decide whether AI could genuinely help.
4. Identify the specific part AI might do.
5. Identify what must remain human.
6. Identify possible risks.
7. Decide how the output would be checked.
8. Prepare the short group report-back.

The seven questions

The last two are the ones that matter, and the ones groups skip if nobody pushes.

1. WHAT IS THE TASK?

A real one from your own week, not a hypothetical.

2. HOW DO WE CURRENTLY DO IT?

Who does it, how long it takes, what usually goes wrong.

3. COULD AI HELP?

“No” is a legitimate and useful answer.

4. WHICH PART COULD AI DO?

Be specific. Rarely the whole task.

WORKSHOP 1 · DO THE ACTIVITY (CONTINUED)

5. WHICH PART NEEDS A HUMAN?

If you cannot name one, look harder.

6. WHAT COULD GO WRONG?

Reputational, factual, legal, linguistic.

7. WHAT WOULD WE NEED TO CHECK?

Name the specific thing, and who checks it.

WHICH AI TOOL?

Use whichever suitable AI tool you already have access to: ChatGPT, Microsoft Copilot, Claude, Gemini, or another approved generative AI tool.

This is not about which product is best. It is about deciding when AI is appropriate, communicating a task clearly, checking the output, and retaining human responsibility. No paid account and no new account are required.

No access on the day? Work with another participant, or use a facilitator-provided example.

EXAMPLE ONLY — not the expected answer

TASK: Prepare a monthly community newsletter.

AI COULD HELP WITH: Creating a first draft and suggesting structure.

A HUMAN MUST: Check names, dates, facts, tone and language before publication.

POSSIBLE RISK: The AI could invent a date or alter a factual detail.

CHECK: Verify every factual claim, date, name and Irish-language section.

WORKSHOP 1 · FINISH THE ACTIVITY

Your expected output

OUR TASK WAS

AI COULD HELP WITH

A HUMAN MUST STILL

THE MAIN RISK IS

WE WOULD CHECK IT BY

WHO IS RESPONSIBLE FOR THE FINAL DECISION?

60-second report back

Say your five lines above, in order, to the room. That is the whole report — no slides, no extra detail.

NEXT: Reflection 1 — What did we learn?

AI can be useful. AI has limitations. Human responsibility remains.

“Can AI do it?” is not the same as “Should AI do it?”
